Draft: 05 Feb 2024

FADE IN:

TITLE: ... For the love of money is the root of all evil." --  
1 Timothy 6:10

MUSIC: "*All Because of You*" composed by Paul Martone plays  
over titles and shots of all manner of commerce in the  
ancient and modern world. (music rights obtained)

THE LOVE & HATE OF MONEY

NARRATOR

Let's face it, we all feel it --  
the stress -- fear -- and control  
that comes with money.

But we also love money. After all,  
it's an essential part of our  
lives. We use money, to, not only  
to pay taxes and bills, but to buy  
the joyful experiences of Life.

Unfortunately, many feel  
overwhelmed by even the thought of  
money: often a love-hate  
relationship. We try not to care,  
but stress is in the air.

There is never enough. Or someone  
has too much. The neighbors always  
have new cars. One has a swimming  
pool. The kids need shoes, but  
college is \$50,000 a year.

Yes, the stress of money is always  
in the air. The constant fear of  
loosing it? Never enough. A  
stockmarket crash or robbery.  
Scarcity.

But deep down we know scarcity is  
artificial. Given the apparent  
size of the universe, we know  
intuitively that the scarcity of  
money -- as a form of energy --  
must also be an illusion. If so,  
how is money manipulated to seem  
scarce? Are we too stressed out to  
even contemplate questions like  
this, let alone solve them?

Let's take a closer look at the subject of money and try to arrive at some solutions to remedy the stress, fear and control it often generates.

#### WHAT IS MONEY?

Academics define money as a medium of exchange; a store of value; and a tally of production.

By medium of exchange we mean money stands in for actual products and services when people want to exchange them. This exchange is known as trade.

By store of value we mean money has, and keeps, value equal to the value of the products and services it represents.

By tally of production we mean money comes into existence when a product or service comes into existence. Money is thus a tally of the products and services created by a civilization.

Wiser minds, like Austrian economists, warn us that money is also a means by which banking and corporate elites extract unjust wealth from people's labor. They tell us money can provide a covert means by which governments finance perpetual wars. They tell us money can facilitate an expanding police and surveillance state.

Yes, money affects us on a personal level but it also produces stress, fear and anxiety for the world in general.

After all, why do millions starve on street corners and in dirt villages while CEOs in glass skyscrapers take home 400 times the base pay of their stressed out workers?

Why does a movie star get \$25 million a picture while the scientist who solves protein folding gets but a bronze statuette on a wooden plaque? Yes unjust enrichment and wealth disparity permeate the world not only in Hollywood and Corporate America, but the Halls of governments around the world. After all what's more expensive and wasteful than a war? And when there is endless money, improperly shepherded, there are endless wars, for money also purchases belligerent politicians.

Thanks to legislation like "Citizens United," K-Street lobby firms have endless amounts of money to manipulate voters into voting for -- not the best candidate -- but a candidate that is the lesser of two evils. No wonder the U.S. Founders advised against political parties, what they called "factions."

Yes, endless "fiat" currency, as we will address, buys a copious supply of TV commercials and media manipulation spammed across the nation into every mind. Mass control of our minds, emotions and actions all courtesy of the money-fueled Mainstream Media.

Lord Acton had a point: power corrupts and absolute power corrupts absolutely. Money, whether loved or hated, is replete with benefits and liabilities, both at a personal and societal level.

So let's continue our walk down Love & Hate Lane and explore the ways stress, fear and control of money have evolved over history.

195,000 years ago our ancestors lived in small tribes foraging for food and resources. There was no need for money because our ancestors shared everything and everyone had enough. All goods and services were freely exchanged.

About 5,000 years ago the invention of farming allowed wandering tribes to settle into permanent locations, today known as towns. The transition from nomadic to permanent communities gave rise to specialized vocations: you grew crops, I cared for the animals. Food and resources were traded as specific products and services for other specific products and services in a system known as barter. If we didn't have what each other needed at a given time, we lent each other what was needed on credit.

As towns expanded into cities and civilization grew, a new technology emerged: money. Instead of directly trading products, commodities like gold or silver would stand in as substitutes for the actual products to facilitate transactions. Thus if two people wanted to trade but did not have the exact products each needed, one would accept gold or silver as a substitute. This "money" could then be used to "buy" needed products at a later time. Since gold and silver were commodities that had intrinsic value, they were widely accepted in trade as "commodity money."

But gold and silver are heavy and subject to robbery, therefore they were often stored in secure warehouses. The warehouse manager would issue a paper receipt to evidence the fact that a certain amount of gold or silver was left in custody.

When the owner wanted to use his gold or silver for a transaction, he simply presented his paper receipt and the warehouse manager would return his gold or silver for expenditure. Paper receipts provided a convenient and accurate way to store value yet made that value available for trade on demand. This system could be considered honest banking.

But everything changed when warehouse managers realized that most of their customers never came to pickup their physical gold or silver. Given this, crooked warehouse managers started issuing more paper receipts than they had gold or silver in storage. They then charged interest on the "counterfeit" receipts, creating the first scheme of "unjust enrichment."

Eventually the crooked warehouse managers got fancy. Warehouse receipts were converted into "certificates, then notes" and lent far and wide. Storage of gold and silver was thus converted into "deposits" and the warehouse managers converted themselves into "bankers."

When bankers of the world realized how lucrative charging interest on nonexistent money was, the practice was institutionalized as "fractional reserve banking."

Whereas "honest money" is actual gold or silver -- or paper certificates that are 100% redeemable in gold or silver -- crooked bankers had learned how to defraud depositors with paper that is not redeemable in gold or silver. Because there is no intrinsic value to paper, the U.S. Government had to pass "laws" forcing WE THE PEOPLE to accept it as so-called money.

Because acceptance of paper money is enforced by government fiat, it's known as "fiat currency". Most countries around the world now use fiat currency known as Federal Reserve Notes, or "Petrodollars".

With the advancement of technology, the digital age brought forth new forms of fiat currency. Credit and debit cards are best known as these enable transactions without even the need for paper.

In recent years, the rise of cryptocurrencies has taken the financial world by storm. Bitcoin and other cryptocurrencies are based on a distributed ledger known as the blockchain. Such digital currency offers decentralization, security and anonymity for all transactions.

Central banks, such as the Federal Reserve System, are exploring their own centralized blockchain technologies, what's known as Central Bank Digital Currency.

From the simplicity of tribal sharing, to barter, to gold and silver, to warehouse receipts, certificates, notes, digital credit-debit cards and finally cryptocurrencies based on blockchain technology, our means of exchange have continually changed over time, especially as bankers learned how to swindle the public more covertly. Given this, let's take a closer look at how money is created and how we are often manipulated.

#### THE MYSTERY OF FIAT CURRENCY

One of the enduring mysteries surrounding money lies in the creation of fiat currency.

How is today's currency brought into existence and how is it manipulated?

Knowledge like this removes many of the obstacles created by an elite that relies on mystery. Clarity empowers and with knowledge, fear is dissolved. Elites behind the banking curtain make the Monetary System insanely complicated so only they, and their \$500-per-hour professionals, can understand its machinations. And part of those machinations stem from the Federal Reserve's partnership with the U.S. Congress and Treasury. The actual creation of money is known as the "Mandrake Mechanism," a process deciphered by G. Edward Griffin in his important book, *The Creature from Jekyll Island*.

As previously discussed, today's currency is created out of debt. Specifically, when Congress wants to spend without further taxing, it borrows. It borrows by issuing IOUs known as treasury-bills, treasury-notes and treasury-bonds. These "debt instruments" are then offered to individuals, large corporations and governments, domestic and foreign. When no one has the money to buy any more debt, the Federal Reserve buys it. Where does the Fed get the money? It literally prints it out of thin air. This so-called "currency" is then labeled "Federal Reserve Notes" and Congress now has more "money" for yet another war.

This process, known as "monetizing debt," causes inflation of the monetary base. Thus when there are more Federal Reserve Notes than products in circulation, prices rise because the government-banking cartel has created too much new money diluting the money already in circulation. Too many dollars chasing too few products.

The dollar has thus undergone a "loss of purchasing power" because expansion of the monetary base decreases the power of each existing dollar to purchase products and services.

Yes, printing money out of thin air, backing it with debt and then forcing its use by government fiat is a practice that makes money-creation quite mysterious, if not insane. It's thus no wonder the average citizen, who works for an honest wage, simply can't believe the theft is so blatant.

As we seek to break free from the stress, fear, and control of money, an understanding of the intricacies of its creation, manipulation and theft become paramount.

Let's continue our walk down Love & Hate Lane and take a look at some early ways money was manipulated to create hidden theft.

#### HIDDEN THEFT -- COIN CLIPPING & ALLOYING

While money has been a powerful force in shaping societies and driving progress, it also holds the potential for hidden theft. This leads to stress, fear, and a loss of control.

One early form of hidden theft that set the stage for the banking mentality starting out as crooked warehouse managers, was "coin clipping."

In ancient times, greedy, war-driven kings and queens would secretly rob their subjects by clipping off the edges of the Coins of their Realms. The gold and silver clippings, when recast, would add up to thousands of new coins, coins created out of hidden theft. Yes, the banker mentality was waking up to the possibilities.

The unsuspecting citizen who accepted these "debased" coins suffered a loss of purchasing power, because the precious metal weight of each clipped coin was diminished.

One way or another crooked kings and queens unjustly enriched themselves until some were caught and had their heads chopped off. Rulers had to get more creative with their "hidden theft."

Thus was born the ruse of alloying gold and silver coins by melting them down and recasting them with less valuable metals, like zinc and nickel. Little by little the coins of the Realm became worthless as their gold and silver content was reduced towards zero.

And think theft like this ended with Rome, 450 AD. Recall America 1965 AD when the U.S. Congress ordered silver dimes and quarters debased to 75% copper and 25% nickel "clads." Like the citizens of Rome, WE THE PEOPLE had OUR silver stolen by similar crooked banker mentalities. Debasing coins allows those in power to benefit from value stolen whether past or present.

#### HIDDEN THEFT - FRACTIONAL RESERVE BANKING

But stealing money from WE THE PEOPLE by clipping and alloying coins was crude compared to what the banker mentality concocted next.

Recall that earlier we discussed warehouses that eventually became banks; gold and silver receipts that became certificates and notes; and warehouse managers who became bankers -- the hidden theft that came next was a stroke of evil genius.

To review: the institutionalization of the Fractional Reserve Banking System introduced a new order of hidden theft. Bankers, who again were the original warehouse managers, realized that only a fraction of their customers came back for their gold or silver deposits -- they just traded the paper receipts rather than carry the metal around. Given this, many never "redeemed" their gold or silver so the warehouse managers--turned bankers figured why not loan out the extra receipts that are never redeemed. In other words, lend at interest the gold and silver that just sat around the warehouse doing nothing -- print up a few extra receipts and lend them out at interest. This is like a hat checker renting out your hat sitting in the closet while you are occupied at the dance.

This scheme of renting out other peoples assets while they are not USING them, has been "legalized" by bankers in partnership with Congress. Hidden theft, institutionalized as "Fractional Reserve Banking," seems honest because, after all, the bankers are only stealing a "fraction" of the gold and the REST is in "reserve." Just like the Federal Reserve System, a misleading term because it is not "federal," there are no "reserves" and it's a private bank not some respectable "system."

To be sure, people get funny when they think hidden theft is happening with their money -- and the proof is the many bank runs down through history, including the Panics of 1893, 1901 and 1907.

With at least four ways manipulation and hidden theft happen -- clipping coins; debasing precious metals; printing currency out of thin air;

covertly lending fractions of other peoples money -- it's no wonder banks cause great instability, if not unjust enrichment for elites in the financial system.

Because of hidden theft, the very system WE THE PEOPLE rely upon for stable, secure monetary transactions is a serious source of stress, fear and loss of control.

#### MONEY AND THE FREE MARKET

At the heart of what's supposed to be the Free Market is a central banking monster known as the Federal Reserve System. Established in 1913, the Federal Reserve's mandate is to keep inflation and unemployment low.

Critics argue that the Federal Reserve's interventions, however do the exact opposite. By manipulating the amount of money in circulation and by spasmodically regulating interest rates, the Fed distorts the free market, creates boom and bust cycles, facilitates malinvestment and fosters an environment of moral hazard.

The idea of using a central bank to create fiat currency and pump it into an economy as government "expenditures" came from a British economist named John Maynard Keynes. The Keynesian theory of monetary policy is that, when tax receipts do not cover profligate spending, governments print debt-backed fiat currency and lend it far and wide to "STIMULATE" their dead and dying economies. This, they theorize, will create jobs and lower interest rates -- in other words, prosperity though walking-dead, deficit expenditures.

Governments love Keynesian economics because it gives them a rationale to borrow and spend as much money as they want regardless of their citizens' demand for balanced budgets.

While apologists of Keynesian economics argue that such interventions mitigate economic crises and promote stability, critics caution against the formation of excessively large government and runaway inflation.

Tampering with the free market also causes welfare programs and economic disparities that can seriously backfire. Two primary examples are Academia and the U.S. Health Care System.

When the government -- "justified" by Keynesian economic theory -- began co-signing loans to college students, so much debt-driven fiat currency flooded the market colleges decided to double, triple and quadruple their tuitions. After all, if every kid has a \$250,000 loan guaranteed by Uncle Sam, why not raise prices.

Same thing happened with the Health Care System. When government-backed insurance pays for everything, doctors, hospitals and pharmaceutical companies double, triple and quadruple their prices. Now a day in the hospital costs \$35,000 and a year at college costs 50,000.

Thank you John Maynard Keynes for the idea of "stimulating" the economy rather than allowing the free market to set prices according to supply and demand. We now live in a world of over-priced products planned for obsolescence or an implosion of the supply chain.

By critically examining institutions like the Federal Reserve System and monetary theories, like Keynesian Economics, we can discover why we are stressed out by money and fear the control bad actors can employ.

#### THE SYSTEM OR THE ACTORS

Does the stress, fear, and control associated with money lie in the System itself or is it the actors who participate? In other words, what is the dynamic between the individual and the collective?

Throughout history, societies have grappled with finding a balance between collective interests and individual interests. While some argue that a more collective approach promotes stability and equity, others emphasize the importance of individual freedom.

The notion of the Borg collective in the STAR TREK series, serves as a metaphor for an extreme system of centralized control. Just as the Borg seek to "assimilate" individuals into a hive mind, a fully centralized monetary system could assimilate individuals into a financial collective. The fear of losing one's individuality and being subsumed by a faceless entity lies at the heart of the fear of money.

Similarly, the concept of a Matrix-style central planning computer is a dystopian future where a select few wield absolute control over the monetary system. In such a scenario, decisions regarding the allocation of resources, wealth distribution, and economic policies would be determined by a small group of technocrats.

To the elitist mentality the idea of a Global Government, staffed by deep state technocrats seems good: a unified structure; worldwide peace; fast, accurate transactions; and the equitable distribution of resources on a global scale. All sounds good on paper. The concept, however, is flawed: Global Government violates a fundamental tenet of the universe: redundancy. What if THE Global Government goes sour and we have no where to run? No back up government. What then? What happens if our world becomes dominated by an immortal, superintelligent AI, a dictator that controls us through a global monetary blockchain of a Central Bank Digital Currency?

Is this not the very definition of stress, fear and control? What's the backup plan when the concentration of power is absolute?

An artificial intelligence, if entrusted with governance, could usher in a reign of total enslavement.

In the quest to break free from the stress, fear, and control of money, it's important to strike a balance between benefits of collective action and the need to safeguard individual freedom.

#### THE CHAINS OF DEBT

In the quest to break free from the stress, fear, and control of money, we must confront one of the most pervasive and insidious aspects of the modern monetary system: debt, a tool for modern-day enslavement.

Debt has become an inescapable part of our lives, both on an individual and a societal level.

Debt often starts out innocently.

A credit card or two, then a loan to buy a car or a house. However, over time, debt can accumulate and become a heavy burden, constraining our choices and limiting our freedom. The dependency created by college debt can encumber young people for years.

As individuals and nations find themselves increasingly in debt, the mechanisms of its control become increasingly apparent. Compounded interest charged on borrowed money accelerates the cycle of debt. While modest interest seems like a fair exchange for the use of capital, it can quickly spiral out of control making it difficult for individuals and nations to escape the grip of debt. But the control and manipulation associated with debt extends far beyond just interest payments.

Those who control the issuance of debt -- and set interest rates via arbitrary decisions at the Fed -- hold significant power over the economy and, by extension, the lives of WE THE PEOPLE.

By creating dependency on banks, the power elite exerts control over entire populations. This leads to biased economic policies that advance banking interests and maintain the status quo for elites. Control like this stifles individual agency, if not unalienable rights and freedoms.

Breaking free from the chains of debt requires exploration of alternative paradigms. It necessitates questioning prevailing economic theories and exploring new possibilities. By fostering financial literacy and promoting responsible borrowing, individuals and governments can reclaim control over their financial lives.

As the sun rises on a new era fueled by our desire to break free from the stress, fear, and control of money, we embark on a journey towards financial liberation, a world where the pursuit of abundance and well-being take precedence.

Let's take a look at the merits and liabilities of the power elites latest proposed alternative: a global monetary system.

#### A GLOBAL MONETARY SYSTEM

From the Bancor, proposed by John Maynard Keynes in 1944, to the Special Drawing Right created by the International Monetary in 1969, the banking mentality's obsession with a global monetary system has never let up.

Today the latest global currency scheme is known as the CBDC, short for Central Bank Digital Currency.

Advocates for CBDC argue that such a global currency would provide a unified approach to addressing many of society's issues. Initiatives like Agenda 21 -- aimed at sustainable development -- emphasize the need for collective action to ensure the "well-being of future generations." Advocates believe a global monetary system could facilitate such initiatives.

The Green New Deal, a spin off from Agenda 21 -- is billed as a framework for addressing Climate Change. By redirecting financial resources toward clean, sustainable energy, this initiative aims to transform economies. A global monetary system -- proponents argue -- could facilitate the financing needed to realize the goals of a Green New Deal.

Concerns however have been raised about the implications. Many fear a global monetary system could lead to the erosion of national sovereignty and individual freedoms, or worse. The concentration of financial power in the hands of a global elite raises serious questions about the potential for universal tyranny.

Wiser minds caution against the dangers of Global Government, where sovereignty could be compromised and dissenting voices could be suppressed -- as we saw happen with Twitter censorship, COVID remedies and the Wuhan lab leak. But most graphic was when truckers had their bank accounts shut down by the Canadian government.

A global monetary system that JUST offers advantages to elites would be risky for the rest of the world's citizens. In short, Citizens need to be in control of their monetary system. Citizens also need to be in control of their energy sources. Since money and energy are two sides of the same coin, this means control of money is control of energy and vice versa.

Fortunately -- as Steven Greer and others discuss -- there are many new technologies that can provide abundant energy that is "carbon neutral". Elites and the world's citizens should be able to agree on such an agenda.

But again, Global Government is risky as there is no where to run when rogue politicians become tyrannical. And yes, it can happen in any country, even Canada. Ask the truckers.

Breaking free from the stress, fear, and control of money would not be facilitated by any global currency whether it be the bancor, the SDR or the now proposed Central Bank Digital Currency -- all Trojan horses to World Government. These risks and liabilities acknowledged, let us now look at why money is important.

#### THE IMPORTANCE OF MONEY

Money can transcend its basic functions as a medium of exchange, a store of value, and a tally of production -- for it holds immense power to drive innovation and grow civilization itself.

As civilization progressed, money became not just a tool for trade, but a catalyst for progress. It provided individuals and businesses with the means to invest in the research and development of new technologies -- most notably the emerging technology of oil. It was the abundance of energy from Saudi oil fields -- converted into the Petrodollar -- that fueled the rapid progress of civilization from the 1900s onward.

With money, and monetary incentives, entrepreneurs brought world-changing ideas to life. Money, in this sense, became the lifeblood of innovation, lifestyles and planetary growth.

In this way, money played a pivotal role in global capital formation. Capital formation -- the PROFIT a business earns by creating VALUE -- enables businesses to expand without the need to BORROW.

In a flourishing society, capital formation is plentiful, if not expanding exponentially.

Given this, such capital -- capital generated from actual production -- goes into direct competition with the pseudo-capital generated out of thin air by dishonest bankers. Thus, the only way bankers can compete is to flood the financial markets with "easy money" -- currency monetized from debt and lent at artificially low interest rates.

Is it any wonder capital formation is kryptonite to the banking mentality? Is it any wonder critics of capitalism obsessively vilify "profit" and glorify "debt"?

Unfortunately, many businessmen do not understand these nuances. They do not realize that, every time they use monetized debt rather than their own capital -- their own savings -- they are participating in "hidden theft". The "love of money" has enticed them to place at risk money stolen from others rather than use their own capital.

When this happens, a moral decay pervades the nation and its monetary system. For otherwise honest beings, THIS is the real source of the stress, fear and control of money: PROFITING FROM MONEY CREATED BY DISHONEST MEANS. Real money is honest. Gold, silver and 100% redeemable paper are honest money therefore NOT the source of stress, fear or control.

Real money facilitates a positive future. Debt-based fiat currency encumbers the future. Real money influences our experiences and shapes our sense of well-being. Monetized debt allows us to pretend that we have what we have not earned.

Real money allows us to acquire material possessions without debt as debt-based currency doesn't work in the long-term.

Debt-based currency dictates we sell our souls short-term to satisfy our lust and greed long-term.

Whether it's buying a house, owning a car, or acquiring everyday essentials, real money grants us access to physical assets that enhance our lives -- without mortgaging our future.

Real money facilitates education, travel, entertainment and personal growth. It provides the ability to explore the world and broaden our horizons without fear or stress.

The presence of real money -- money earned through non-debt, non-theft, free-market, capital-formation activities -- offers a sense of security, stability, and control. Real money is not created or acquired through hidden theft.

Real money created through capital formation is more than an instrument of trade, it's an energy force that permeates every aspect of our lives. It causes change in a world that refuses to change.

#### WHY NOTHING SEEMS TO CHANGE

In the quest to break free from the stress, fear, and control of money, we confront a perplexing reality: there never seems to be real change. The apparent "change" we see is often fake: it leads us right back to the same conditions.

Ironically, there is no "force" preventing change. The reason there is no change is because those at the top usually DO NOT WANT CHANGE. They want the status quo.

The people who maintain the status quo are sometimes referred to as the "power elite", a term coined by C.

Wright Mills in his well-known book of same title. The Power Elite like it the way it is. They don't want change. When you are on top, why would you want change? Change what? Any change may lower your status to BELOW the top. Change is thus a potential liability to those in power.

So the first thing to realize when dealing with the stress, fear and control of money is the people in power usually don't want to change anything -- they only make it SEEM like they want change. Consider political parties like the Democrats and the Republicans. These are ostensibly two parties for change, yet the same big government, high-tax policies are recycled, or swapped between them.

Financial elites do not experience stress, fear or the control of money in the same way you and I do. As F. Scott Fitzgerald put it: "the very rich are different from you and me." The very rich are often the CAUSE of stress, fear and control -- they are usually not the EFFECT of it. The very rich thus have no incentive to change. Their modus operandi is to conserve their power. Again, they generate a popular illusion of change, a progressivism, but they put the boots on and never walk.

Given this, it's no wonder the only way populations have been able to cause change is revolutions. But is war the only thing that can motivate change?

Fortunately, the use of extreme force may not be the only way to cause change. It's a long shot but if the Power Elite could see the RATIONALE of causing change by changing itself, change would happen organically.

If enough "wiser minds" realized that Life does not have to be a "zero sum game," change could happen quickly.

Since there is no scarcity of resources in an infinite universe, one's gain does not have to come at another's loss. An infinite pie creates a civilization without limit, a civilization where all can thrive.

#### EMBRACING A SILVER SUNRISE

We have traveled the lane of love and hate and seen many sights. We have discussed *real money* and how it differs from fiat currency. We have scanned history and seen that trade started as sharing.

We have seen that gold and silver were, and still are, *real money*. At each step we have seen how the banking mentality -- in partnership with the state -- invented new schemes of hidden theft. Starting with coin clipping and alloying metals, they converted money into paper and lent it without consent.

They then dropped all pretense of hidden theft when they started printing money out of thin air in the light of day. No wonder there is stress, fear and loss of control when it comes to money.

We have visited the free market and seen how tampering with its ability to facilitate trade leads to malinvestment and all manner of pricing problems, not only in the Health Care industry but Transportation, Agriculture and even Academia.

We have seen how Keynesian economics gives government a "justification" to create endless debt, debt used to create and control a welfare-warfare state.

We have seen that both the system AND the actors are problematic. In short: there will be no Silver Sunrise if the banking mentality institutionalizes Central Bank Digital Currency. Such a scheme would doom humanity to a global police and surveillance state. WE THE PEOPLE of the world must ensure this does not happen.

We have seen that personal debt is hard, but the National Debt is so horrendous the only solution may be a debt jubilee. Given the liabilities, we should stay away from debt -- as a nation and as individuals. We should cut our credit cards in half. We should only borrow to purchase products and services that make it possible to innovate and produce. These policies will steadily improve the individual, and in doing so, improve society.

Through savings, responsible borrowing, budgeting and allocation we can gain control over our monetary system. One cannot always control their income but they can control their spending.

Financial freedom also involves creating multiple streams of active and passive income. This is easier said than done, but one can do it by holding one or more jobs, starting a business and investing at least 10% of earnings wisely.

No one really knows what wise investing means, but history shows that legacy wealth is built on real estate, precious metals and fine art. Note these are all HARD assets, NOT paper. If one insists on investing in paper, stocks and bonds could make sense: but only to the degree one is hedged with silver, gold and art.

Bear in mind, the real price of gold and silver is probably many times the spot advertised by a banking mentality that likes to print money out of thin air. Thus, gold and silver, like interest rates, are artificially suppressed.

If the whole financial system implodes, millions will run to gold and silver -- especially silver because gold will be so high, few will be able to afford even an ounce. High tech "money" like, cryptocurrencies, may look promising, but remember, gold and silver have served humankind for thousands of years. New is not always better.

Through an application of the knowledge presented in this film, we can mitigate the stress of the current monetary system.

In doing this, we can experience immediate relief, even some freedom. But breaking free from the stress, fear and control of money will only fully manifest when we harness the abundant energy of Life -- the energy of the universe - - flowing through us as we work together to secure our God-given Natural Rights.

By these means we can and will create a bright future, a Silver Sunrise that will illuminate Humanity forever and ever.
